Assistant Commissioner for Patents
Washington, DC 20231

Sir:

Responsive to the Office Action mailed 09/06/2002 setting forth a restriction requirement and period of one month to reply, applicants hereby respond by the following election with traverse. A Petition for Extension of Time Under 37 CFR 1.136(a) accompanies this response.

In particular applicants traverse the undue division of their invention into an inordinately high number of allegedly independent and distinct inventions. The mere fact that the PTO proposes to divide 22 claims (including 5 independent claims) into 5 groups of allegedly independent and distinct inventions is evidence of arbitrary restriction practice serving no legitimate purpose other than the generation of multiple fees from applicants forced to file multiple applications. In particular, the present application provides information on the relatedness and common use of a number of groups of molecules of the present invention, including polyketide synthase encoding genes and their encoded proteins, nitrogen pathway genes and their encoded proteins, serine threonine protein kinase genes and their encoded proteins, sigma factor genes and their encoded proteins, and antibiotic resistance genes and their encoded proteins.

However, to comply with the restriction requirement and advance the prosecution of the present application, applicants hereby provisionally elect the subject matter of Group I,
